

# Press Release

Jowat-Toptherm® 236.50 is above all to be used in wrapping procedures using resinated paper foils, and thermoplastic foils with reverse primer. CPL materials have to be tested separately before use in serial production. When veneers are used, resilience forces must be observed which depend on the thickness of the veneer and on the design of the profile.

The softening point of approx. 110 °C is substantially above the one for EVA hot melt adhesives, and slightly below the softening point for the conventional Jowat-Hightherm® APAO hot melts. Therefore, the Jowat-Toptherm® 236.50 has a clearly higher heat resistance in comparison to standard EVA hot melt adhesives for wrapping. When used with many decor paper and Alkorcell® foils, the heat resistance levels will even reach those of the well-known, high-performance APAO hot melts.

Jowat actually has more formulating projects under way to expand the Jowat-Toptherm® range of products. This will allow the wrapping of thicker CPL and veneer without limitations.

## Introducing Jowat

The Jowat AG with headquarters in Detmold is one of the leading suppliers of industrial adhesives. These are mainly used in woodworking and furniture manufacture, in the paper and packaging industry, the textile industry, the graphic arts, and the automotive industry. The company was founded in 1919 and has manufacturing sites in Germany in Detmold and Zeitz, plus three other producing subsidiaries, the Jowat Corporation in the USA, the Swiss Casanin AG, and the Jowat Manufacturing in Malaysia. The supplier of all adhesive groups is manufacturing over 70,000 tons of adhesives per year, with around 650 employees. A global sales structure with 15 Jowat sales organisations plus partner companies is guaranteeing local service with close customer contact
